BENCHCUT SQUARING AND MEASURING ARM

Driven by our commitment to continuously improve and provide solutions that simplify your work, we've expanded our Inbest cutters line to include a squaring arm with a millimetric guide and integrated measuring stops.

This addition enables precise squaring of materials and setting of exact cutting sizes, enhancing the Inbest cutter's versatility and accuracy.

Maximum Flexibility: Utilize the front arm for trimming or cutting smaller sizes, and the rear arm for larger sizes, with a measuring stop of up to 90 cm.

Versatile Configuration: The square arm can be fitted either on the right or left side of the cutter, catering to individual installation and usage preferences. The rear arm's installation is straightforward, attachable either to the machine or directly to the table top.

Two measuring stops and millimetre guide

Increase precision and speed when making repetitive cuts by simply adjusting the stop to the desired cutting dimension.
